

Flex

Pre – ski footboard to test ski boots

The pre-ski footboard Flex has been conceived to permit the skier to simulate the movements of the ski boot during use, checking in this way whether the boots being worn are comfortable during the various moments of skiing. In this way, it is possible to choose at the time of purchase, the boots that are most suitable for one's own feet. The footboard can be used furthermore for per-ski training.

Technical data

Composed of a structure in aluminium PE – HD Black, dimensions:

- Length: 860 mm.
- Width: 700 mm.
- Height: 200 mm.
- Weight: 7,5 kg.
